1 Introduction

We were tasked with developing a solution to address the needs of an electronic manufacturing company, specifically focusing on streamlining the assembly process. Thus, we conceptualized a web platform tailored to this industry, aiming to optimize efficiency and organization. Our solution, comprising three core classes - Workstation, Device, and User - is designed to meet these objectives. The User class acts as the central component, representing individuals engaging with the electronic manufacturing web platform. It encompasses various roles, including Worker and Administration, catering to those involved in assembly operations and system management. Integral to the assembly process, Workstations are designated areas within the manufacturing facility where specific tasks are executed during the assembly of electronic components or products. These Workstations are meticulously organized into start, middle, and finish sections, providing a structured framework for overseeing the entire assembly process seamlessly. Devices, representing electronic items manufactured by the company, play a crucial role in the workflow. They are managed within the platform to ensure smooth integration into the assembly process. Through effective user management, structured Workstation divisions, and streamlined handling of assembly Devices, our platform aims to enhance productivity, efficiency, and overall organization within the assembly workflow. Ultimately, our goal is to optimize the manufacturing environment for the electronic manufacturing company, ensuring a seamless and efficient assembly process.

2 Implementation

As I said earlier we were developing a software prototype. Therefore we were mainly focused on the functionalities and necessary features that should be included for our system. Therefore we delegated the work among ourselves to create each features individually and combining them in the last. Each one were supposed to develop features like Login page for workers and the admin, workstation01 Page, workstation02 Page, workstation03 page and admin page. And according to that we were able to develop the functional parts easily and integrate it in the last run. The whole codes were developed using Java and we used Java script(react) for developing the GUI for our prototype.

3 System Requirement Specification

3.1 Software Requirements

- Java version 17.0.2
- Java JDK 17
- Maven 3 or later
- Springboot version 3.10.1
- IDE (IntelliJ ID, VS Code)
- Workers should be able login to their account and able to manage their account and view the progress of the system.

- Admin should be able to login to their account and view the progress of the all workstations and able to contact the workers as well.
- Workers should be able to pass the components to the next station and complete the process.

4 Installation and Setup

4.1 Downloading the Source Code

Clone the backend repository from your favorite Git client.

Repository link – <https://github.com/PrabathBK/CompanyB>

4.2 Building the Application

Clone the repository containing the Manufacturing and Assembly Line Planning and Management application's source code to get started. Verify that MongoDB, Spring Boot, and the Java Development Kit (JDK) are installed on your computer. To run the Spring Boot application, either as a stand-alone Java application or using an IDE of your choice, use the CLI. After the application is running, all of the backend functionality may be accessed using the different API endpoints that are set within the controllers.

Postman can be used to test the API endpoints. Request the desired actions be carried out, and then follow the provided business logic to ensure that the responses match expectations.

Customise and improve the application to suit your needs, This could entail adjusting current features, introducing new ones, or, if needed, integrating with other systems. Finally deploy the application to cloud platforms

4.3 Configuration

- Database Configuration:
 1. Database Type: MongoDB
 2. Host: localhost
 3. Authentication: Enabled
- Framework Configuration (Spring Boot):
 1. Spring Boot Version: 3.10.1
 2. Dependency Management: Maven
- Security Configuration:
 1. Authentication Method: Username/Password
 2. Password Policy: Minimum 8 characters, alphanumeric

5 Requirement Analysis

5.1 Functional Requirements

This section outlines use cases for actors. The employer and the Admin are the actors. Login use case is common to both admin and employer.

5.1.1 Common Use Case

Use case: **Login**

Brief Description

Users of the systems can log in to the system as employers or admins. At the login, an employer can be assigned to an assembly station.

Initial Step-By-Step Procedure

1. User chooses to log in as admin or worker.
2. System prompt to enter username and password.
3. User enters username and password.
4. System compares them with the database.
5. System allows login as admin or worker if password and hierarchy level match with the database.

5.1.2 Worker Use Cases

Use case: **Fetch Order**

Brief Description

A worker at the start point of the get order details to be made and components required.

Initial Step-By-Step Procedure

1. Worker selects to display available orders to be complete.
2. System displays available orders.
3. Worker selects order to start.
4. System updates orders to be started and the number of items.

Use case: **Passing to Next Station**

Brief Description

After the worker completes his part of the procedure, they should pass the components to the next station.

Initial Step-By-Step Procedure

1. Worker selects to pass to next station
2. System asks for order ID and number of elements
3. Worker enters them

4. System deduces the number of items in this station corresponding to that order ID and increases the number of items in the next station corresponding to that order ID.
5. If this is the final assembly station system will deduce the number of items to be completed from the order.

use case: **Complete**

Brief Description

The worker at the final workstation will be shown a button to if all items are completed to correspond to this order.

Initial Step-By-Step Procedure

1. If the number of items to be completed is zero, the System will display a button to complete the order
2. Worker at the end of the assembly line will select complete order.
3. System will update the order status to "Completed-to be quality checked"
4. System will delete all entries in all the assembly stations corresponding to this order.

5.1.3 Admin Use Cases

use case: **Admin Review**

Brief Description

Admin is the person who is accountable whole assembly line. So he can log in to the system and check the status of the assembly line.

Initial Step-By-Step Procedure

1. Admin selects to review
2. System asks what needs to be reviewed (Order/Worker/Assembly Station/All)
3. Admin selects what needs to be reviewed
4. System shows the attributes that need to be reviewed

5.2 Non-Functional Requirements

The web application will be on a server with high speed Internet capability ensuring the application can handle concurrent user access and maintain responsiveness during peak usage periods.

Assembly line operates will be equipped with tablets with connection to application.

Admin will be equipped with laptop with connection between the Web pages and the database.

5.3 Domain Requirements

Should adhere to relevant legal and regulatory requirements like data protection..

6 Class Diagrams

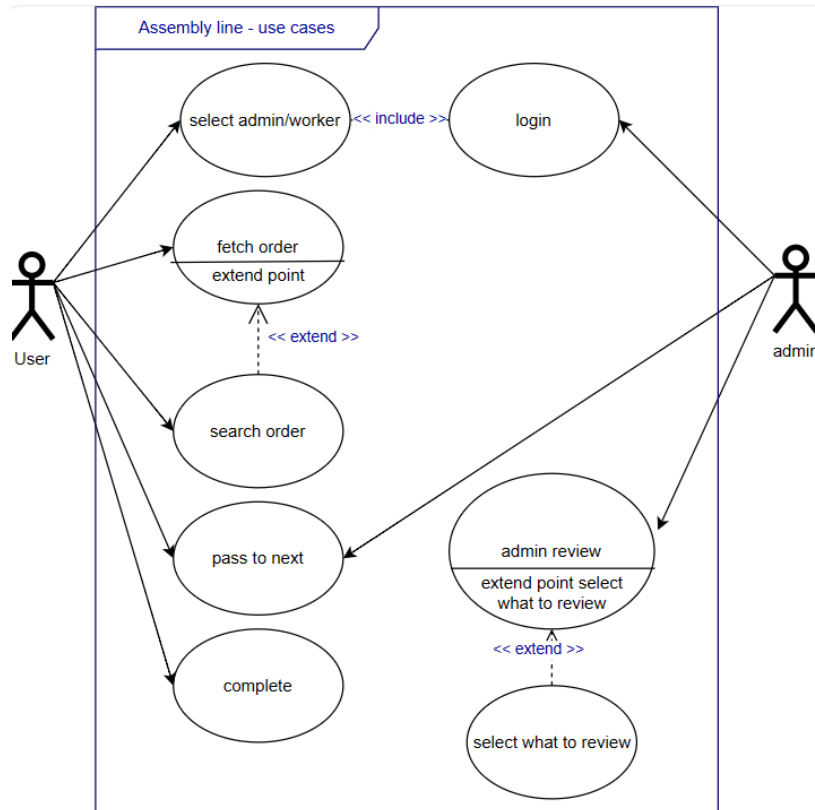

Figure 1: Use Case Diagram

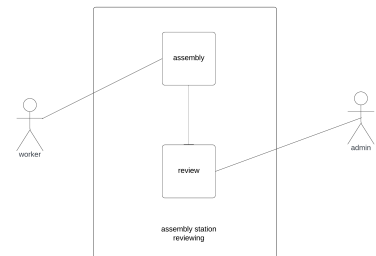

Figure 2: System Environment

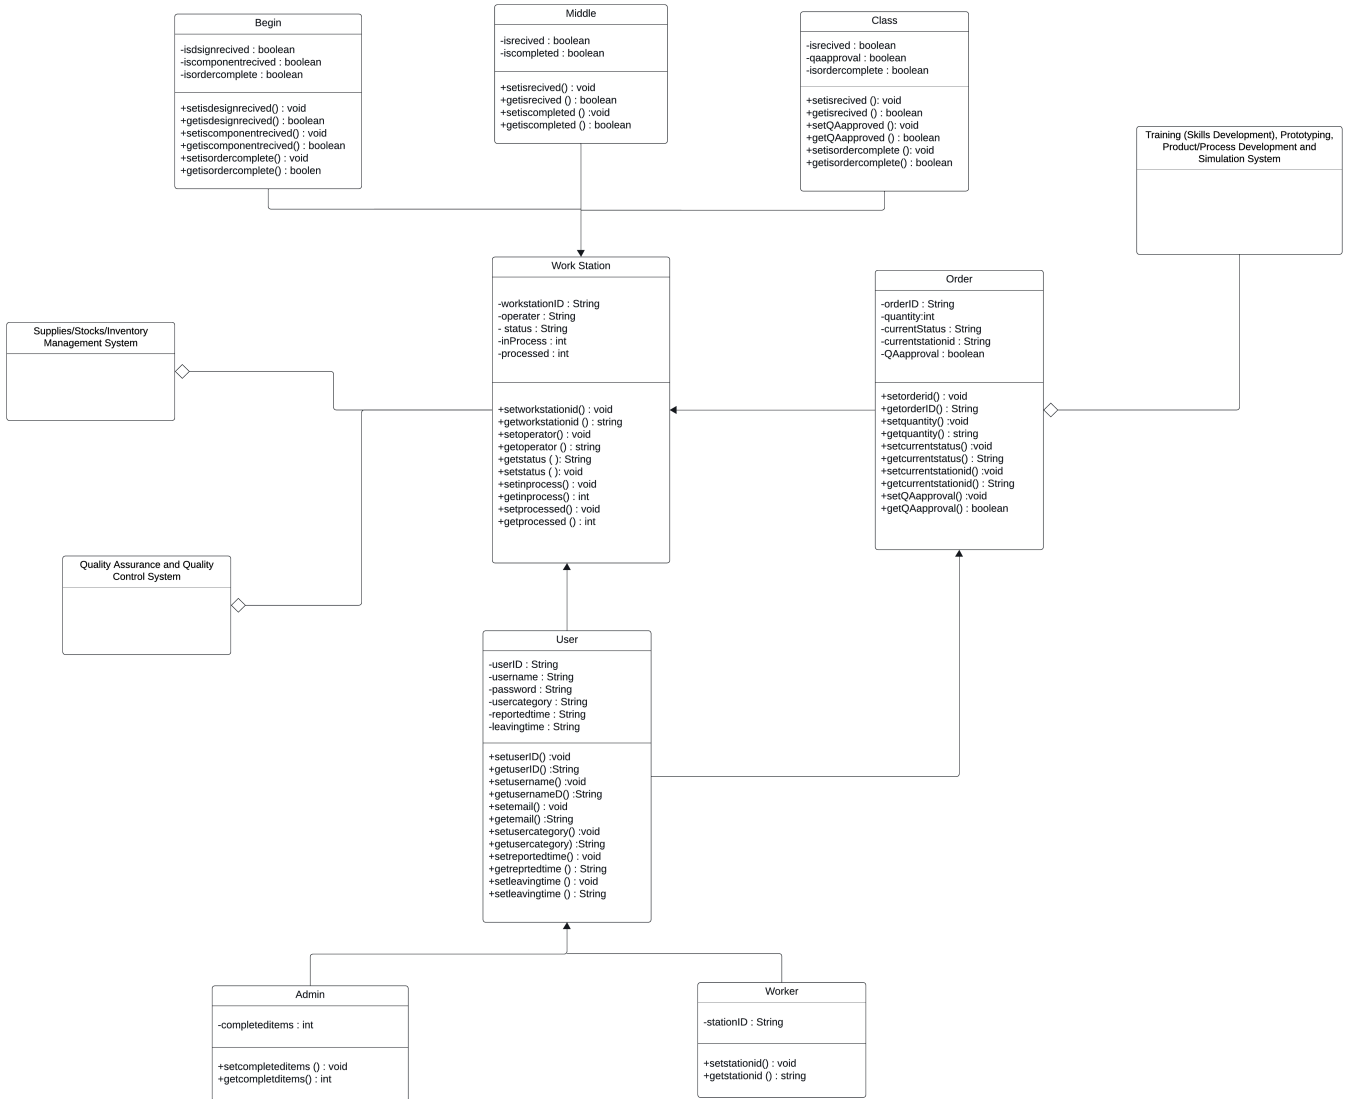

Figure 3: Class Diagram

7 User Interfaces(Designs)

We have followed the design flow, and implemented the following GUIs to complete the given task.

7.1 Selection Page

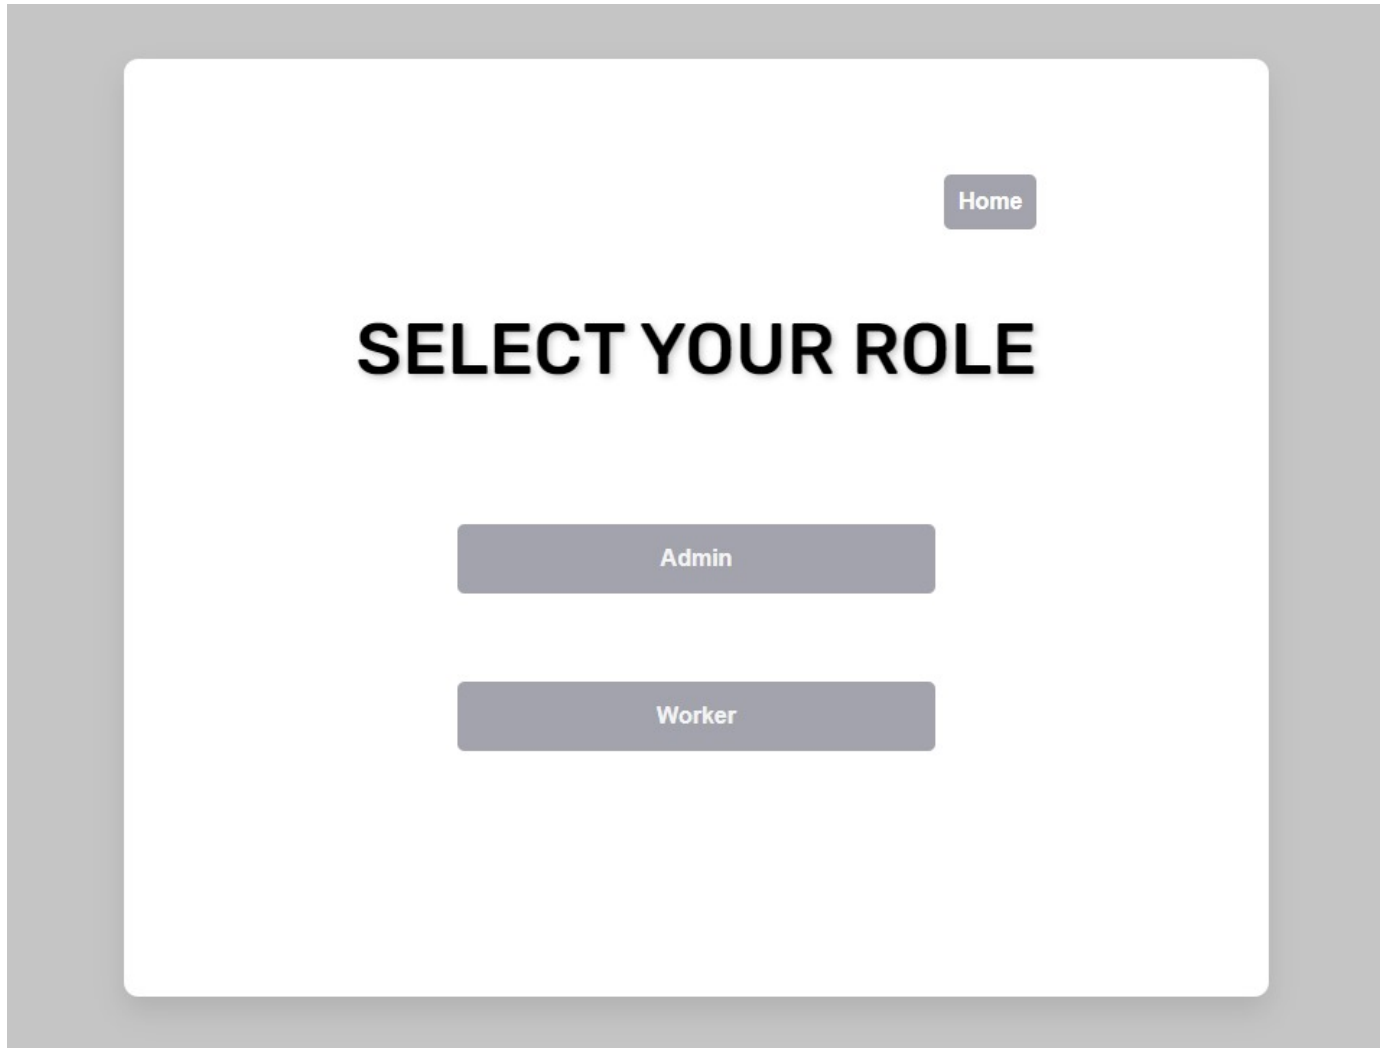

Figure 4: Selection Page

Here, we are able to select our role, and we are then taken to the appropriate login portals (Admin portal and Worker portal).

7.2 Admin Login Page

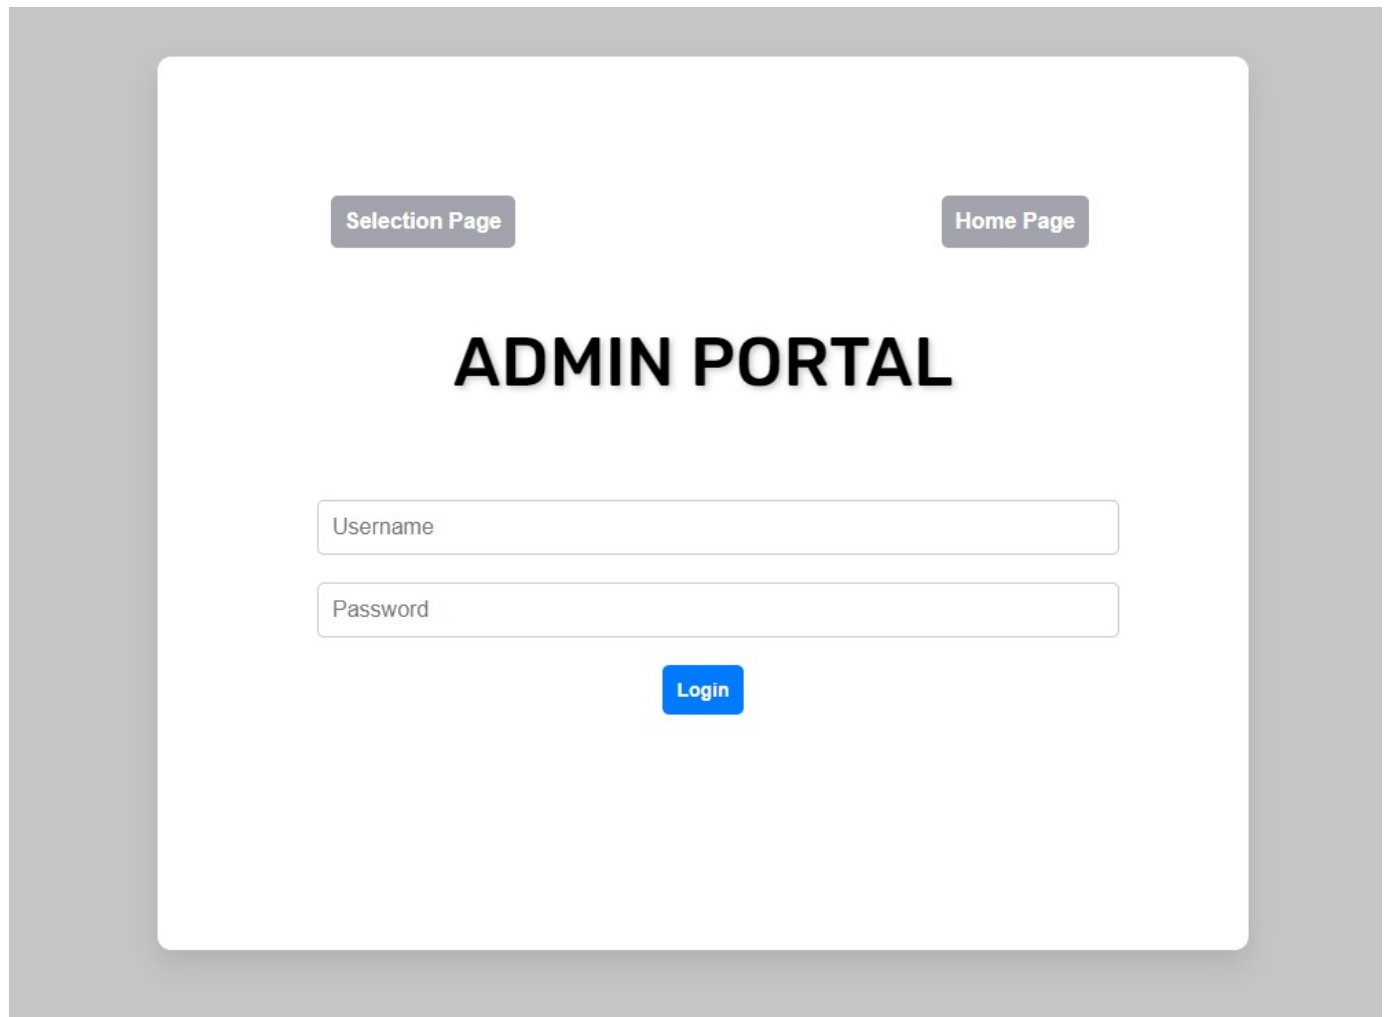

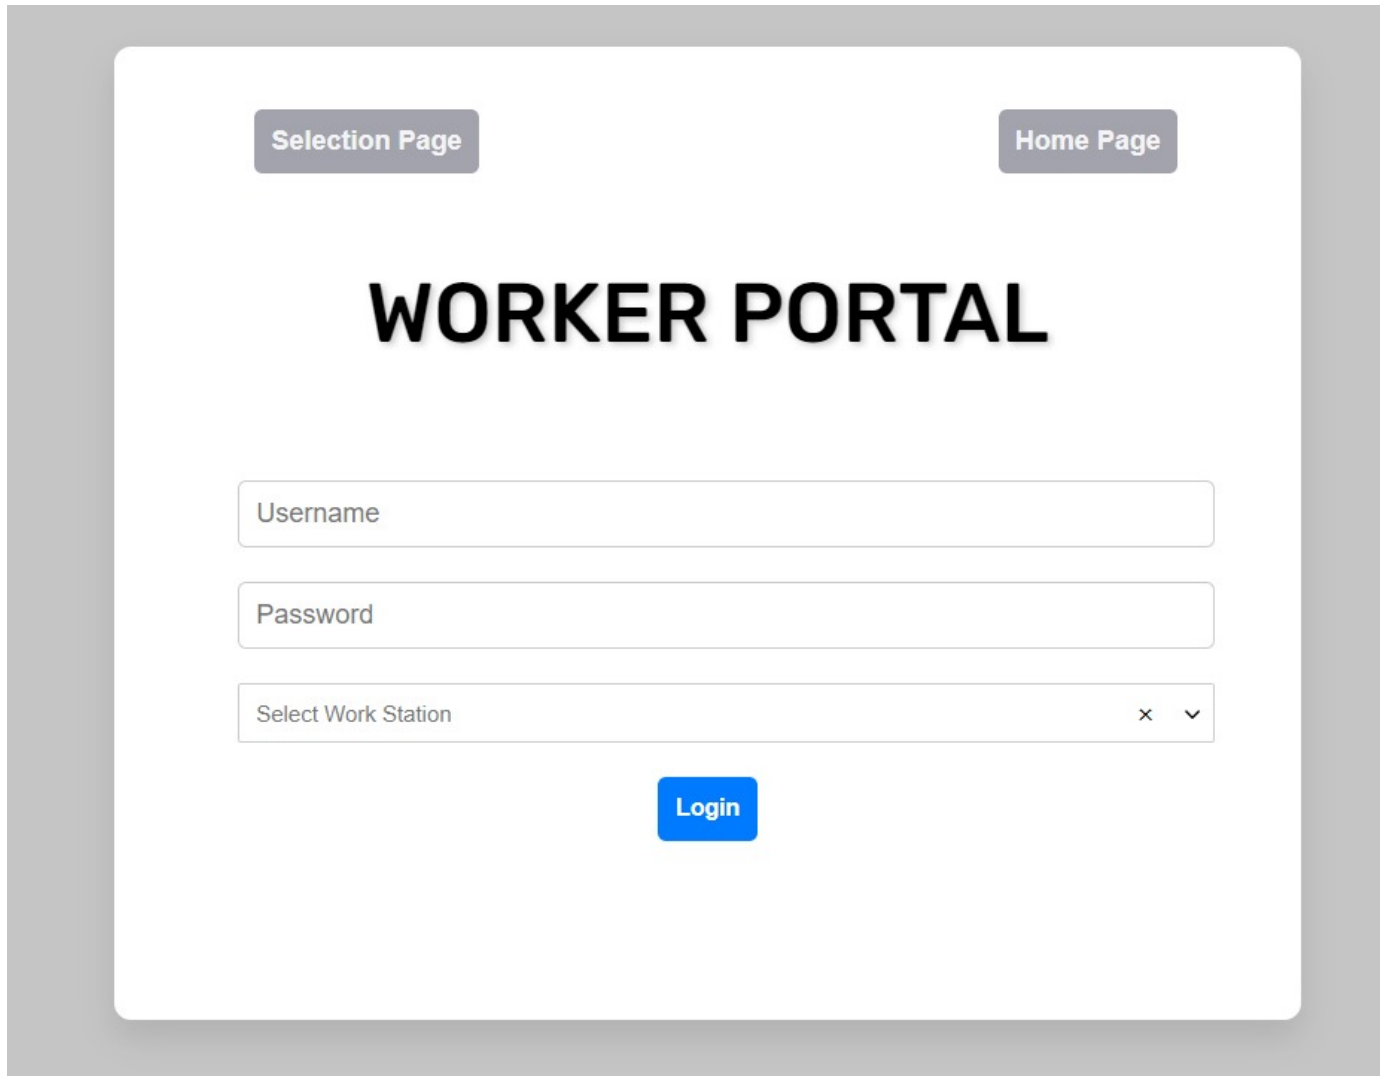

The image shows a web interface for an Admin Portal. It features a white rectangular area centered on a gray background. At the top of this white area, there are two gray buttons: 'Selection Page' on the left and 'Home Page' on the right. Below these buttons, the text 'ADMIN PORTAL' is displayed in a large, bold, black font. Underneath the title, there are two input fields: the first is labeled 'Username' and the second is labeled 'Password'. Both fields are white with a thin gray border. Below the password field, there is a blue button with the word 'Login' in white text.

Figure 5: Admin Portal

By entering the login credentials, administrators can access the system.

7.3 Worker Login Page

The image shows a web interface for a 'Worker Portal'. At the top, there are two buttons: 'Selection Page' and 'Home Page'. The main heading is 'WORKER PORTAL'. Below this, there are three input fields: 'Username', 'Password', and 'Select Work Station'. The 'Select Work Station' field has a dropdown arrow and a close button (x). A blue 'Login' button is positioned below the input fields.

Login

Figure 6: Worker Portal

The image shows a web interface for a 'Worker Portal'. At the top, there are two buttons: 'Selection Page' (active) and 'Home Page'. Below these is a large heading 'WORKER PORTAL'. Under the heading are three input fields: 'Username', 'Password', and a dropdown menu labeled 'Select Work Station'. The dropdown menu is open, showing three options: 'Work Station 1', 'Work Station 2', and 'Work Station 3'. The first option is highlighted. The entire interface is set against a light gray background.

Selection Page Home Page

7.7 Workstation 03

The screenshot displays the 'WORKSTATION 03' interface. At the top right is a 'Sign Out' button. The main title 'WORKSTATION 03' is centered. Below it is an input field containing 'OD0001' and a 'Submit' button. A 'Progress Bar' section shows a blue bar at 28.0%. A central box lists statistics: 'On-Going Items: 10', 'Completed Items: 28', 'Remaining Items: 14', and 'Errors: 4'. At the bottom, there are two 'No of Items' input fields, a 'Pass' button, an 'Add' button, and a red 'Add Error Item' button.

Item Type	Count
On-Going Items	10
Completed Items	28
Remaining Items	14
Errors	4

Figure 13: Workstation Three

Here, the employee can input the order number and view the order's status along with some crucial information on the workstation one.

8 API

APIs are utilized to facilitate communication between the frontend application (written in React) and the backend server.

8.1 Endpoint URLs

- **Endpoint for admin login authentication.** This API will invoke the admin login procedure of the backend. It will check if the username and password match in the database and check if the role is Admin. If the user meets these requirements, it will give access to the admin interface for the user.

```
http://localhost:8090/companyB/manufacturing/User/adminLogin/${details.  
username}/${details.password}
```

- **Endpoint for workstation login authentication.**

```
http://localhost:8090/companyB/manufacturing/User/adminLogin/${details.  
username}/${details.password}
```

- **Endpoint for fetching orders.** This API is called from workstation one only when the worker accepts raw materials for the inventory. They should fetch the order. The backend will get orders from the order management system and fetch them to the manufacturing system.

```
http://localhost:8090/companyB/manufacturing/FetchOrders/{orderId}
```

- **Endpoint for adding orders to Workstations.** This will be invoked when workers expect orders from previous workstations. It will change the attributes of the relevant OnGoingOrder object.

```
http://localhost:  
8090/companyB/manufacturing/OnGoingOrder/WorkstationOneFetch/{orderId}
```

- **Endpoint for worker sign-out action.** This will change the active status of the workstation. Signing in is limited to only one user at a time.

```
http://localhost:8090/companyB/manufacturing/User/workStation/signout/1
```

- **Endpoint for passing items to the next station from Workstations.** It will change the attributes of the relevant OnGoingOrder object.

```
http://localhost:8090/OnGoingOrder/WorkstationOnePass/{orderId}
```

- **Add error item.**

```
http://localhost:8090/companyB/manufacturing/OnGoingOrder/  
WorkstationOneError/' +orderId+'/' (1)
```

8.2 Request Methods

- PUT requests are used for actions like updating order status or passing items to the next station.
- POST requests are used for actions like adding new orders or logging in users.

8.3 Handling Responses

After making API requests, the frontend application handles the responses received from the server.

- If a login request is successful, the user is redirected to the admin interface or worker interface page. This will be done using the response body. If the response body equals "login successful", the front end will push the relevant interface point.
- If an error occurs during the request, the response will contain the error. (i.e. "incorrect password", "wrong username" etc). This error will be displayed in the front end using alerts.
- Adding an Order to Workstation One: To add a new order to the system, enter the order ID and click the "Add" button. If the order already exists, a message will be displayed indicating that the order already exists. You can then re-enter the order ID and click "Submit" to continue processing the order.
- One workstation can only log one worker at a time. If a worker is already logged into the system, another worker cannot log into the same workstation and an alert will be displayed indicating that a worker is already logged into the station. If a new worker wants to log into the station, the existing worker must log out first. There is no back button available; this ensures accountability in the manufacturing process and the responsibility of each worker.

8.4 Error Handling

The frontend application includes error handling mechanisms to deal with cases where API requests fail or return errors. Error messages are displayed to provide feedback to the user about any issues encountered during the interaction with the server.

    assertEquals("Username is wrong", responseEntity.getBody());
}
}

```

10.2 Test Results

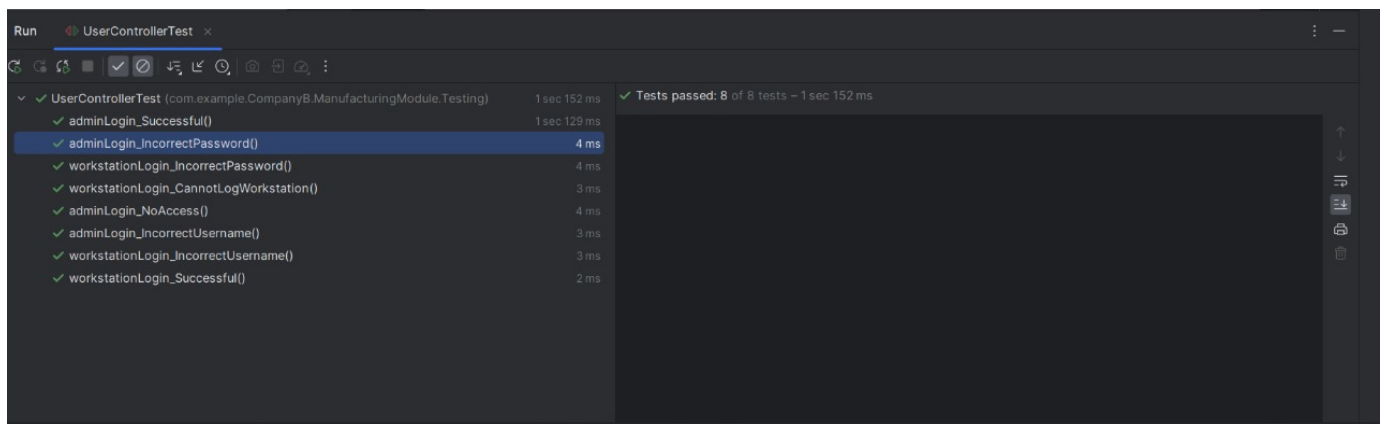

Figure 18: Test Results

11 Self Reflection

Working on this project within a team and company setting has provided a comprehensive learning experience, highlighting the importance of effective collaboration and teamwork. Communication played a central role, as clear and open channels ensured that everyone was aligned with project objectives and responsibilities. Task delegation was a crucial aspect, allowing us to leverage each team member's strengths and expertise. Throughout the project, we cultivated an environment of mutual support and trust, encouraging creativity and innovation in problem-solving.

Managing tasks and adhering to deadlines was essential for maintaining project momentum and ensuring timely delivery of milestones. This required careful planning and organization, as well as the ability to adapt to changing priorities and unforeseen challenges. As a team, we developed strategies to address issues as they arose, fostering resilience and flexibility in our approach.

Quality assurance was a continuous focus throughout the project lifecycle. We implemented rigorous testing procedures to identify and rectify any issues promptly, ensuring that the final product met high standards of performance and reliability. This commitment to quality not only enhanced the user experience but also instilled confidence in our stakeholders.

Moreover, this project provided valuable opportunities for professional growth and skill development. From technical proficiency in frontend and backend development to project management and client interaction, each team member gained valuable insights and experiences. We embraced a culture of continuous improvement, actively seeking feedback and learning from both successes and setbacks.

In summary, working on this project as a team within a company environment has been a transformative journey, equipping us with invaluable skills, experiences, and lessons that will undoubtedly shape our future endeavors.

e0dd7386 - Tharoosha, 3 days ago : back end part of on going error handling
f0a83921 - Tharoosha, 3 days ago : Merge branch 'CustomFrontEnd' of https://github
.com/PrabathBK/CompanyB into CustomFrontEnd
3a45b037 - Tharoosha, 3 days ago : Interface done
f5c963a8 - Prabath Wijethilaka, 3 days ago : Workstation 3 initialized
2e4370a3 - Prabath Wijethilaka, 3 days ago : update xml
720ee297 - Prabath Wijethilaka, 3 days ago : Error button workStation one done
c9bfdd9f - Prabath Wijethilaka, 3 days ago : Merge branch 'CustomFrontEnd' of
https://github.com/PrabathBK/CompanyB into CustomFrontEnd
71a21500 - Tharoosha, 4 days ago : workstationone interface done
65c48a59 - Prabath Wijethilaka, 4 days ago : Add error to model
55519843 - Prabath Wijethilaka, 4 days ago : Add error to model
0ba28cb8 - Tharoosha, 4 days ago : Merge branch 'CustomFrontEnd' of https://github
.com/PrabathBK/CompanyB into CustomFrontEnd
eab6c0fa - Tharoosha, 4 days ago : progress bar logic
c9ffa86a - Prabath Wijethilaka, 4 days ago : Pass and Add input fixed
7e01ab61 - Tharoosha, 4 days ago : morning Commit2
7dcd7be9 - Tharoosha, 4 days ago : Merge branch 'CustomFrontEnd' of https://github
.com/PrabathBK/CompanyB into CustomFrontEnd
386ef51d - Tharoosha, 4 days ago : Commit Morning
0dfc8f66 - Prabath Wijethilaka, 4 days ago : workspace yml
6719e16e - Prabath Wijethilaka, 4 days ago : Admin page fetch done
3a7f7c33 - Prabath Wijethilaka, 4 days ago : done
1cceb4d8 - Tharoosha, 4 days ago : All problems are resolved hopefully :-)
afc8c45d - Prabath Wijethilaka, 4 days ago : Delelte Unwated FrontEnd files and
add wanted version
0771eb55 - Tharoosha, 4 days ago : Merge branch 'CustomFrontEnd' of https://github
.com/PrabathBK/CompanyB into CustomFrontEnd
1c5a0de8 - Tharoosha Lakshan, 4 days ago : Merge pull request #5 from PrabathBK/
FetchOrderBackEnd
578f5495 - Tharoosha Lakshan, 4 days ago : Merge branch 'CustomFrontEnd' into
FetchOrderBackEnd
1ce626f0 - Prabath Wijethilaka, 4 days ago : WorkStation one progress bar done
ea8802b1 - Tharoosha, 4 days ago : Signed out updated
8ab4fc9d - Prabath Wijethilaka, 4 days ago : Mid night conflict solve
d2b27f8a - Tharoosha, 4 days ago : commit 4
01a91147 - Prabath Wijethilaka, 4 days ago : Reapply "Ongoing order commit"
0e389fa1 - Tharoosha, 4 days ago : Revert "Ongoing order commit"
53a6b504 - Tharoosha, 4 days ago : Revert "Merge branch 'CustomFrontEnd' of https
```

```

    ://github.com/PrabathBK/CompanyB into CustomFrontEnd"
334490cb - Tharoosha, 4 days ago : Revert "commit 2"
3635453a - Tharoosha, 4 days ago : Revert "commit 3"
9a6fac0e - Tharoosha, 4 days ago : commit 3
99ecfe01 - Prabath Wijethilaka, 4 days ago : commit 2
90b77d1f - Prabath Wijethilaka, 4 days ago : Merge branch 'CustomFrontEnd' of
    https://github.com/PrabathBK/CompanyB into CustomFrontEnd
c4eea3f3 - Prabath Wijethilaka, 4 days ago : Ongoing order commit
aae58897 - Tharoosha, 4 days ago : commit to reslove 2
6b3cffc7 - Tharoosha, 4 days ago : Merge branch 'CustomFrontEnd' of https://github
    .com/PrabathBK/CompanyB into CustomFrontEnd
51129485 - Tharoosha, 4 days ago : Admin User Login Done
ced92c35 - Prabath Wijethilaka, 4 days ago : Order Fetched Done
de1a3c7a - Prabath Wijethilaka, 4 days ago : order fetch done
1355b9f9 - Prabath Wijethilaka, 4 days ago : Merge branch 'CustomFrontEnd' of
    https://github.com/PrabathBK/CompanyB into CustomFrontEnd
37e2a03a - Prabath Wijethilaka, 4 days ago : Order placing API success
fa8d2d13 - Tharoosha, 4 days ago : Merge branch 'FetchOrderBackEnd' into
    CustomFrontEnd
37ebe43a - Prabath Wijethilaka, 4 days ago : Craete Get order from other module
    and fetch in our system
20ff31c5 - MeghanaWickramasinghe, 4 days ago : WORKSTATION ONE DESIGN
7178edb5 - MeghanaWickramasinghe, 4 days ago : WORKSTATION DESIGN
77f24d3a - kumaragekdph, 4 days ago : Merge branch 'CustomFrontEnd' of https://
    github.com/PrabathBK/CompanyB into CustomFrontEnd
5ad40f38 - kumaragekdph, 4 days ago : admin page change login button
d2765874 - Prabath Wijethilaka, 4 days ago : change
cc8db86d - Prabath Wijethilaka, 4 days ago : conflict resolve
0c4a4b94 - Prabath Wijethilaka, 4 days ago : change percentage
34d0f08a - kapiladewamng21, 4 days ago : Progress bar done
da9e293b - kapiladewamng21, 4 days ago : Revert "adimin interface edited 2"
99b9ce91 - kapiladewamng21, 4 days ago : adimin interface edited 2
e6fe0201 - kapiladewamng21, 4 days ago : admin interface edited
c3489f9c - kumaragekdph, 4 days ago : Merge branch 'CustomFrontEnd' of https://
    github.com/PrabathBK/CompanyB into CustomFrontEnd
